#### The Idea - Nabil

- **What is your product?** - Our product is called FinSight Ai which is an advanced financial tracking and predictive analytics platform to help users with their financial decisions. Using AI-powered understanding, machine learning and real-time market data, FinSight AI looks over future expenses, income trends, and investment opportunities to help users make better financial choices.
- **Target Audience**
  - Individuals: People who want smarter finance management, so they don't stress about anything, they aren't sure what to do.
  - Small businesses - Companies looking to track their expenses and for AI-driven cash flow
  - Investors - For people who are seeking investment insights
- **Background of the problem or need:** Individuals who are tracking their financial situation might make mistakes or aren't sure what to do in certain situations, or companies that need to track their budget or expenses.
- **Importance and relevance of the idea:** This product can be used from a vast age range from students that are in college to businesses that are looking to track their expenses which makes the idea relevant to today's world. As well as that, this digital world is evolving every minute so users such as investors would want to be up to date with what is doing well in the market and which is doing better than others.

#### The Market - Evan

- **Who will you sell this to?**
- FinSight AI will be sold to three primary target audiences: I
  1. **Individuals** - We will sell to people who are looking for smarter personal finance management, this includes people of all ages. For example, college students, full-time workers, or just anyone who wants AI-driven budgeting and expense tracking.
  2. **Small Businesses** - These will be companies that need AI-driven cash flow tracking, automated expense management, and financial forecasting to optimise their operations.
  3. **Investors** - These are individuals that require real-time market insights, predictive analytics and AI-powered investment recommendations to enhance their portfolio management.

#### **What is the need for our product in the market?**

- The need for FinSight AI in the market comes from several key challenges faced by individuals, businesses, and investors when it comes to managing their finance.
  1. **Individuals: Financial Management Challenges** - Many individuals struggle with budgeting, tracking their expenses, and financial planning for the future. Human errors in these areas may lead to overspending or missed savings opportunities. AI-driven automation can simplify and optimise personal financial management.
  2. **Small Businesses: Cash Flow & Expense Tracking** - Due to their lack of resources and decreased spending power, small businesses often lack a dedicated financial team, which makes it difficult to track expenses and cash flow efficiently. FinSight AI offers real-time tracking and automated insights for these businesses, which will reduce the risk of financial mismanagement.

3. **Investors: Market Insights & Portfolio Optimisation** - Investors need real-time market data and trend analysis to make informed decisions, this is because the stock market changes rapidly, requiring AI-powered insights for better predictions. This machine learning algorithm will be able to identify and analyse trends faster and more accurately.

- **Unique Selling Proposition (USP) or innovation.**

- FinSight will be an intelligent, automated, and predictive financial assistant that will help individuals, small business, and investors to make smarter financial decisions effortlessly. It will offer personalised recommendations, and automation that will redefine financial management for the digital age.

#### The Poster - Joseph

- **Designing the layout** - Deciding on how we wanted to create our poster was a big decision, we had to evaluate consumer retention, colour theory and design basics. The first was figuring out what platform we would use to create it. After using a decision-making grid, we decided to use Canva as it was the tool we were all the most comfortable with. Once a medium was decided on, we realised that delegating the work of the poster to one or two students would be more productive than having six working on it simultaneously due to clashing opinions. This led to Joseph and Nabil creating the poster, whilst the rest of the group did research into design patterns. We learnt the importance of having a 'call to action' centered in our design, and how colour theory plays an important role in attracting an audience, this led to us using more warm and trusting colours to lead consumers into a sense of security.
- **Considerations** - A hurdle we encountered was understanding and realising our target audience. We learned that younger demographics such as Gen Z are more inclined to get personal finance advice from social media and applications with roughly 52% of Gen Z saying they get personal finance advice online (Experian, 2024). Whereas 39% of baby boomers consult financial professionals such as a CFP or CFA when it comes to personal finance. (Insurance News Net, 2024).

#### Problems it will solve - Adam

- **Lack of Budgeting & Financial Planning:**
  - **Tracking Income and Expenses:** A large number of individuals struggle to keep track of their monthly income and expenses, which makes it hard to manage finances effectively. This often leads to financial chaos and missed opportunities for better money management.
  - **Overspending & Financial Instability:** Without a clear financial plan, many people often overspend, leading to mounting debts and overall financial instability. Many don't have a system in place that limits unnecessary expenses or encourages smart spending choices.
- **Limited Access to Financial Guidance:**
  - **Expensive Financial Advice:** Access to quality financial advice is often expensive and out of reach for many individuals, particularly those with average or lower incomes. As a result, most people are left to navigate their finances without expert help, making mistakes along the way.
  - **No Real-Time Financial Guidance:** Many people need quick answers to their financial questions but have no immediate source of professional advice. They may struggle to find trustworthy sources for real-time financial guidance or advice on their specific situation.
- **Overload of Financial Information:**
  - **Complex Financial Jargon:** The world of personal finance is filled with complex terminology and industry jargon, making it difficult for the average person to navigate. This often leads to intimidation and a lack of confidence when it comes to making sound financial decisions.

- **Lack of Simplicity in Financial Tools:** Many available financial tools and apps are either too complex or not personalized enough to be truly helpful. Users often struggle with complicated interfaces, failing to find a solution that gives them clear, actionable financial insights without the stress.

#### **Importance and relevance of the idea - Kevin**

- Because it fills a critical gap in the market, our business idea is extremely important. By concentrating on a particular issue or gap our company addresses, we're setting up our business to address a significant need that rivals have failed to recognise or adequately address. For instance, if our concept centres on environmentally friendly packaging options, it not only satisfies customer need for more environmentally friendly options but also supports international initiatives to cut waste and fight climate change. This double effect of resolving a real-world issue while also advancing more general societal or environmental objectives improves our company's value proposition. Furthermore, our concept's scalability guarantees that it can adjust to changing consumer preferences, legal requirements, or market trends, making it robust and future-proof. Our concept may be able to establish a distinct market niche by emphasising innovation and consumer-centric design, which will increase long-term profitability and client loyalty.
- Our business idea is relevant if it fits in with both established and new market trends. For example, our innovation capitalises on the growing reliance on digital transformation across industries, if it uses technology such as automation or artificial intelligence to streamline. Efficiency, convenience, and personalisation are top priorities for both consumers and businesses, and our proposal addresses these needs. Additionally, our solution becomes even more pertinent if our target audience consists of younger, small businesses, tech-savvy demographics or industries that are experiencing rapid upheaval. The post-pandemic trend towards e-commerce, remote work, and health-conscious living further emphasises the demand for flexible, progressive business structures.

#### **Future Potential & Scalability - Bryan**

- FinSight AI has a strong potential for future growth and could become a full-blown financial management ecosystem for individuals, small businesses, and investors in several other advances. It could adapt to the evolution of technology and financial trends by bringing new features under its control, such as automated tax filings, credit-score tracking, and even personalized debt reduction plans, thus in essence, an all-in-one financial assistant.
- Scaleable to every corner of the globe, FinSight AI could give very regionalized financial insights, manage transactions in multiple currencies, and adjust to different local financial laws. This makes it possible for the platform to go international, managing the finances of all users around the world in a more efficient way.
- The AI engine will continue to improve over time, understanding the user's responses to become smarter in predictions and even better in providing personalized recommendations.

By partnering with banks and educational institutions, FinSight AI can reach more people such that it can integrate itself into the individual's existing financial ecosystem. The constant learning, global adaptability, and strategic partnerships combined position FinSight AI as the most scalable and future-proof solution for modern financial management.

## Who Did What

- **Joseph**

- Helped create the Poster using **Canva** and implemented the research done on design, layouts and color theory done by other group members
- Wrote the Poster Section of the report
- Researched about various financial funds, VC funds, Hedge Funds, Private Equity to get a better understanding of the investments, primarily compound interest.

- **Nabil**

- Helped with coming up with the idea.
- Wrote the Idea section
- Came up with the startup of the idea, for example, how does it work, who would this be beneficial to, how it's innovative and wrote a summary of each heading so then the rest of the group members can expand more on the points made.

- **Kevin**

- Helped with the idea of what the poster was going to be about, and a suitable layout that would attract the demographic it should appeal to.
- Wrote the Importance and Relevance of the Idea Section.
- Researched how our business idea addresses critical market gaps by aligning with consumer needs, societal and environmental objectives, and adaptability to emerging trends like digital transformation and post-pandemic shifts in e-commerce and remote work.

- **Adam**

- Gave input for ideas for the poster and sections
- Completed the problems it will solve section
- Researched different solutions for our project
- Regularly brainstorming for ideas

- **Bryan**

- Was involved in the brainstorming process when coming up with the idea.
- Developed the 'Future Potential and Scalability' section, researching how the product could evolve, expand internationally and form strategic partnerships.
- Provided general feedback in group discussions, ensuring everyone was content with the final concept.

- **Evan**

- Helped to brainstorm through different project ideas, before landing on this one with the team.
- Created "The Market" section of the report by identifying the need for our product, who we will be selling it to, and our unique selling proposition/innovation.
- Completed market research on our competitors and similar products that already exist, in order to identify what we needed to be successful, along with what was needed to make our product stand out.
